It's time for smart living

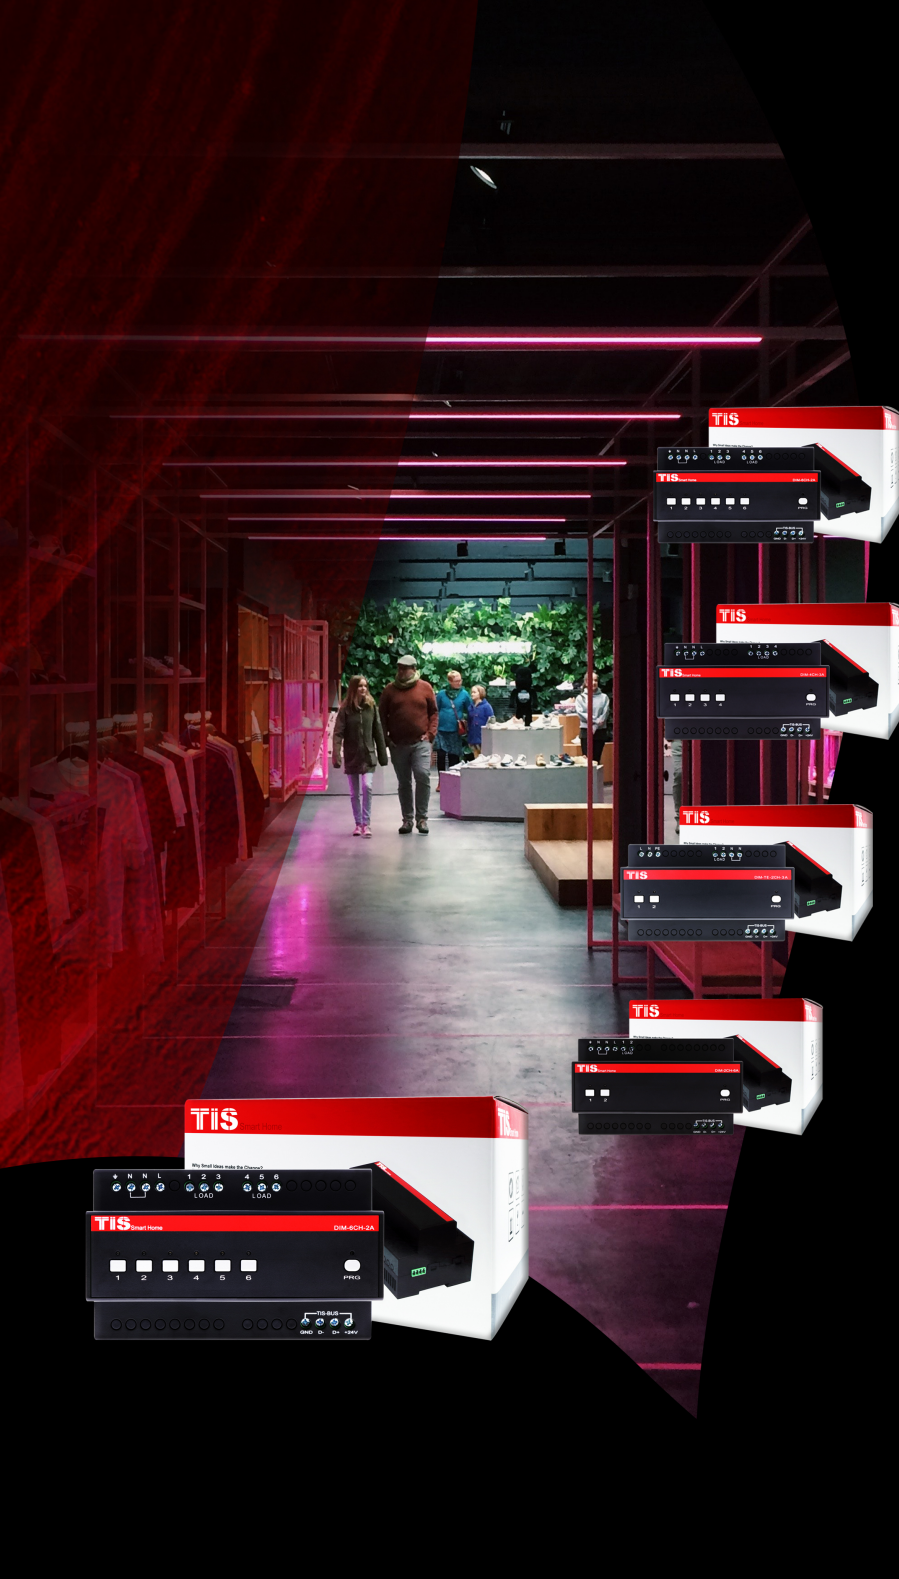

DEMAND TRIGGERS INNOVATION

Technology is developing so fast and so does the world around us. New needs are created and new responses are required. The same is true about lighting; light types are getting more and more evolved and to control them, there must be more advanced smart solutions. The old TRIAC technology is somehow outdated since it is not configurable with LED, CFL and other energy-efficient lamps. Aiming at resolving such a problem, TIS Smart Home Company introduces Trailing Edge (TE) Dimmer; a smart solution to dim all types of lights.

This universal dimmer which is available in two models is also compatible with high voltage lights (110/230V). 2ch/3A and 4ch/1.5A TE Dimmers are the best lighting assistants in your residential/commercial project.

The structure of this device is as such that even in short circuit situation, it stays intact. Its advanced protection structure simply turns it off in case of overload.

Another practical feature of TE Dimmer is the two side buttons placed on its module. These buttons can be used for testing and manual turn ON/OFF in emergency situations.

No more flickering lights, TE Dimmers dim lights neatly and limitlessly. When installed, you can connect them to TIS-BUS system and enjoy its automatic and harmonious performance with other smart solutions. You have a restaurant? Create as many scenes as you wish with only a touch. Add schematic elegance to the environment and let the customers have their most memorable meal at your restaurant.

TIS group of experts attempt to apply their knowledge and integrity to engineer the most practical solutions for today's smart needs all over the globe.

TE Dimmers are here to make a pleasant atmosphere in different commercial and residential areas.
